

2026-27 SPONSORSHIP OPPORTUNITIES

Formula U Racing Sponsorship Packet

Give students the chance to build something real.

Your support can turn years of student work into a car that finally moves.

Give students the chance to build something real

For many members, Formula U is their first opportunity to take an idea off a screen, manufacture it with their own hands, and discover whether it works in the real world.

A classroom without a finish line

Formula U Racing is built and managed by University of Utah students from engineering, business, design, and other disciplines. They take responsibility for the entire program—from fundraising and planning to fabrication, testing, and competition. Every challenge becomes part of their education.

The barrier is not ambition

The students already bring the time, ideas, and determination. What they cannot provide alone are the specialized parts, safety equipment, materials, and manufacturing resources required to finish the car. A sponsor helps close that gap and keeps their work from stopping at the shop door.

Your support gives students room to learn, fail safely, solve difficult problems, and try again—the experiences that turn a student into a professional.

The students are the purpose

Formula SAE lets students face real engineering, financial, safety, and leadership decisions before their careers begin.

Formula SAE has challenged university teams since 1978. The electric vehicle category was introduced in 2013, and Formula U transitioned from combustion to electric competition in 2016. The team has more than two decades of Formula SAE experience representing the University of Utah.

20+	2016	100%
years competing	transitioned to electric	student run

What students take forward

Members work across engineering, software, composites, operations, finance, and outreach. They gain practical experience, confidence, professional relationships, and proof that they can solve difficult problems together.

What a sponsor makes possible

Support protects the time students have already invested and gives them the chance to test their ideas. It helps ensure that financial limits are not the reason a promising project—and the learning behind it—stops short.

Formula U team and car, circa 2018–19.

Electric performance engineered by students

The current vehicle platform combines a compact high-voltage powertrain with a lightweight chassis and fully independent suspension.

Key systems and materials

- EMRAX 188 motor and Rinehart Motion Systems PM100DXR motor controller
- IM7 8551-7 unidirectional pre-preg carbon fiber and HexPly 914 twill-weave pre-preg
- HexWeb CR-III 5052 aluminum honeycomb core
- Fully independent double-wishbone suspension

Vehicle specifications reflect the team’s current supplied data and may change as design and testing progress.

A \$15,000 goal for the essentials

The team’s current low-end fundraising goal supports four immediate needs required to return the car to safe, reliable operation: replacement driver safety equipment, tires, materials, and two motor controllers.

Driver safety equipment	Replace helmets, fire suits, gloves, shoes, and other required equipment so students can test and operate the car safely.
Two motor controllers	Purchase two replacement controllers needed to restore the electric drivetrain.
Tires	Purchase multiple tire sets so the team can test, learn from the car, and prepare for events.
Materials	Supply the metals, composites, electrical components, fasteners, and consumables needed to finish the car.
Funding priority	The \$15,000 figure is a low-end working goal. Funds will be directed to these needs based on safety, testing results, lead times, and component availability.

Every contribution moves the project forward

Flexible funding lets the students solve the most urgent problem first as testing results, lead times, and component availability change.

Expertise matters too

Donated safety gear, tires, controllers, materials, fabrication, software, facilities, and professional guidance can be just as meaningful as cash support.

Stand behind Formula U Racing

Options begin at \$250 and build toward a \$5,000 title sponsorship. Support above \$5,000 can be customized. All recognition is subject to University approval, applicable brand rules, availability, and the final written sponsorship agreement.

TITLE SPONSOR

\$5,000+

- Proposed premier logo placement on the Formula U race car
- Proposed logo recognition on team apparel
- Potential feature across team-managed channels
- Potential recruiting or technical engagement with the team
- Potential access to a team resume book, if permitted
- Potential shop visit and team presentation
- Proposed team website recognition

MAIN SPONSOR

\$3,000+

- Proposed large logo placement on the Formula U race car
- Proposed logo recognition on team apparel
- Potential feature on team-managed social media
- Potential recruiting or technical engagement
- Potential access to a team resume book, if permitted
- Potential shop visit
- Proposed team website recognition

PRIME SPONSOR

\$1,500+

- Proposed medium logo placement on the Formula U race car
- Potential team-managed social media recognition
- Potential access to a team resume book, if permitted
- Potential shop visit
- Proposed team website recognition

SPARK SPONSOR

\$750+

- Proposed small logo placement on the Formula U race car
- Potential team-managed social media recognition
- Proposed team website recognition

COMMUNITY SPONSOR

\$250+

- Proposed name recognition on the team website
- Potential inclusion in a shared team thank-you post
- Potential digital team update after the competition season

When the car moves the impact travels with it

A working car gives students more than a competition entry. It becomes something they can share with campus, the community, future team members, and the people who helped make it possible.

Manufacturing support CNC machining, waterjet or laser cutting, welding, composites, coating, inspection, or fabrication support.	Technology support Motor controllers, engineering software, electronics, sensors, data systems, licenses, or technical training.
Materials and safety support Driver equipment, tires, metals, fasteners, adhesives, wire, connectors, carbon fiber, cores, resins, tooling, or consumables.	Facilities and testing support Dyno access, track time, lab equipment, transportation, storage, testing facilities, or safety resources.
Community and talent support Potential campus displays, community appearances, recruiting events, shop tours, technical talks, mentorship, or internships, subject to required approvals.	

Let people see what their support made possible

Once the car is ready, potential appearances may include campus events, community events, local SCCA autocross events, and car shows. Any appearance or sponsor recognition is subject to vehicle readiness, organizer and University approval, applicable policies, and the team’s schedule. These moments can help students share their work, meet professionals, and inspire future members.

Help put the car and its students in motion

Start with a conversation. Formula U Racing and the appropriate University office will confirm the contribution type, approved payment route, and any recognition before funds or goods are accepted.

1	Contact the team	Email formula.u.racing@gmail.com with your organization, area of interest, and proposed cash or in-kind support.
2	Classify the support	The appropriate University office will determine whether it is processed as a charitable gift or as sponsorship support with benefits in return.
3	Confirm the terms	Formula U Racing will document approved recognition, brand use, deadlines, contacts, and any other terms in writing.
4	Use the official route	Complete the contribution through the University-approved payment or giving process provided for that support type.

University processing

Contributions are processed through the University of Utah and Mechanical Engineering using the University-approved route for the specific contribution.

A charitable gift generally does not include substantial benefits in return; a sponsorship may include approved recognition or other benefits. The University will determine the applicable classification, documentation, payment instructions, and any tax treatment. Formula U Racing does not promise tax deductibility. Contact the team before contributing so the correct process can be confirmed.
